

FOR IMMEDIATE RELEASE

May 29, 2019

Official Statement

A valve at HNWS well station #4 has failed causing a disruption in the water system hydraulics resulting in lower water pressure for some customers within the service area. Due to this mechanical issue, you may also experience water discoloration. Additional HNWS personnel are in the field flushing the lines and the situation should return to normal within a day or two. There are no boil water restrictions at this time.
